

Wood burning fires and stoves

2022/2023

 Dik Geurts

Lovers of the real wood fire

The name Dik Geurts has been synonymous with craftsmanship and design ever since the company was founded, and over the past 40 years it has become a household name in the fireplace world. Since 2007 Dik Geurts has been fully integrated in DRU Verwarming B.V., an innovative company that has guaranteed top quality for centuries.

In addition to being designers, we at Dik Geurts are particularly fond of the real wood fire. In our factory in Duiven, The Netherlands, we work hard every day on the quality and ease of operation of our stoves and fires. With this brochure, we would like to show you how the combination of simplicity, experience and knowledge leads to beautiful fires and the most beautiful flames.

ENVIRONMENT Wood firing and aeration	4

Save on wood,
fine dust and
the environment

All wood burning stoves and fires in the Dik Geurts range have a particularly high efficiency. A higher temperature is reached in these closed and clever woodburners, and as a result combustion is much more complete and efficient. Even residual soot particles are fully burned, so you save on wood, emit less particulate matter and soot particles, and thus protect the environment.

EcoDesign & Defra

From 1 January 2022, European legislation sets requirements for the minimum efficiency of a stove and the maximum emission of particulate matter. All our fires and stoves comply with this legislation and carry the EcoDesign 2022 label. Several Dik Geurts fires and stoves are also Defra approved.

Climate neutral

In principle, heating with wood is CO₂ neutral. During the growth phase of a tree, CO₂ is absorbed from the air. When the tree is cut down and burned, the same amount of CO₂ is released into the atmosphere. In order to be able to remain climate neutral, sustainably sourced wood must be used. Therefore a new tree is planted for every tree that is cut down. This process ensures everything remains nicely in balance.

Energy label

The Dik Geurts wood burning stoves are provided with an energy efficiency label. The greener the label, the better it is for the environment. Our stoves are all in the A-class or better.

The right way to burn

The best setup

With the so-called **'Swiss method'** you can burn wood safely and cleanly. At the bottom of the stove you should place large logs, on top of which you should put small pieces of wood, and on top of those, firelighters. Replenish the heating space when all that is left is a glow bed. Place a number of logs with the cleft side down in the fire box and open the air supply.

The right wood

The fuel must be sufficiently dry and suitable as firewood. Good firewood has a moisture percentage of 15%-20%. You should never burn waste wood such as chipboard or old railway sleepers, or treated wood. The combustion of waste or treated wood can produce toxic fumes. As well as being unsafe, this is also very harmful to the environment.

Scan the QR code for an explanation video about burning wood.

The right output

The output of a wood burning fire or stove must match the space you want to heat. If you have a fire with too much output, the room will soon become too hot. You will then not be able to let the fire burn to its full capacity and this can cause odour nuisance or extra pollution of the chimney. If the power is too low, you run the risk that the fire will not heat the room enough. This is especially annoying when the fire has an important function in the heating of your home. Dik Geurts offers a wide range of stoves and fires for larger and smaller rooms. Because Dik Geurts fires can also be fired at low power (4 kW), they are extremely suitable for use in spring or autumn.

kW (Output, indicated in kilo Watt).

External air

Insulation of houses is improving more and more these days. To ensure that sufficient fresh air enters the house, ventilation systems are often installed. Depending on the situation in your home, you may need a specific type of connection (EA or RS) to feed air to the fire. The Dik Geurts EA fires can be fitted with an outside air connection. This way hardly any oxygen is taken out of your house. There are also RS fires with an outside air connection, which take the air for combustion almost completely from outside. These fires are ideal for very modern, airtight houses.

EA ('External Air'), used in neutral or overpressure situations. The vast majority of oxygen for combustion comes from outside.

RS ('Room Sealed'), used for underpressure in the living room. Oxygen for combustion comes almost entirely from outside.

Calculate output

Calculate the content of the space you want to heat (length x width x height). Next, it is important to make get an idea of the extent to which your house is insulated. For example, do you have double-glazing and wall and floor insulation everywhere? Then your home belongs to type A. Is your home not optimally insulated, without double-glazing in every window? Then your home belongs to type B. Is your home poorly insulated and with no double-glazing? Then your home belongs to type C. Knowing this you can see in the graph below what capacity (in kilowatts) is needed to heat your home.

Warm heart for Uganda

At Dik Geurts we care for the world around us, and human beings also deserve our attention. In our project 'A fireplace for you, a future for her', part of the proceeds from our fires is used to provide women in Uganda with a microcredit for a tree plantation.

Thoughtful
technique,
simple
to use

A Dik Geurts wood stove is not just a cabinet in which you can burn wood. It is a thoughtfully-designed device that ensures efficient and clean combustion at a high efficiency. Our fires and stoves have a closed combustion chamber (so no grate) that provides good insulation, and the flue gases that are released during combustion are led outside via an ingenious labyrinth.

Simple operation

Dik Geurts fires and stoves are easy to operate. They have a single lever to regulate the surprisingly sophisticated air supply. Thanks to this, Dik Geurts fires and stoves ignite very easily.

Infrared glass

At Dik Geurts we use infrared glass for a number of our fires and stoves to circulate the heat in the fire box. This gives a higher efficiency, retains the heat in the fire and as a result the glass stays clean much longer.

Vermiculite

The combustion chambers of all Dik Geurts fires are insulated with heat-retaining vermiculite. For a nice contrast with the yellow flames, the vermiculite in the combustion chamber of our design fires is coloured dark anthracite.

Floor plates

For a complete set-up and extra protection of the floor, we offer round, rectangular and square floor plates. Finished in dark anthracite steel and available in different sizes.

A Dik Geurts wood stove always has a high efficiency, low emissions of CO and fine dust and ultimate fire control. Guaranteed.

Simple operation: just one lever

Optional floor plate

Design fires

The eye-catcher
for every interior

A design fire gives your home character and can be the beating heart of any interior. The Dik Geurts design fires can seem to float in space and at the same time form a natural unity with the rest of the room.

Ventilated

Instyle 700V Next

Fire insert with ventilating fan

These ventilated inserts are equipped with a ventilating fan, which heats a room faster. When switched on, a pleasant, warm airflow can be felt from the front of the fire or through the convection openings.

Why Instyle V Next?

- Rapid heat distribution
- Impressive fire view
- Simple operation
- An efficient replacement for old fireplaces

How does it work?

A special adapter gives you full control of the fan. There are four speeds for gradual to rapid heating. And, thanks to a smart control sensor, the fan automatically adjusts to the desired temperature.

Easy installation of the Instyle and Prostyle fires

The various connection options ensure that the stove is quick and easy to install, regardless of the installation situation. There are three options for flue gas extraction, for exact dimensions see page 65.

1. Connection without drain material to an existing chimney flue (sealing with ceramic wool)
2. Connection with flexible or fixed pipe (**Liner Kit Pro**), Ø 150 or 180 mm
3. Connection with rejuvenated pipe (**connection piece**), Ø 150 or 180 mm

External air kit

Kit for supply of fresh air from outside.

- Ideal for fully insulated houses
- Optional at 500
- 1000V, 600V, Tunnel (only base)
- For rear and base connection
- Dimensions: Ø 80 mm

Linerkit Pro

Connection piece for flexible or rigid pipe.

- Optional with: 500 - 1000, 600V, Corner, Triple, Tunnel
- Connectable from the inside of the fire
- Reducer with 3 screw holes
- Dimensions: Ø 150 mm, Ø 180 mm

Connection piece

Connection piece for rejuvenated pipe.

- Optional at: 500 - 1000, 600V, Corner, Triple, Tunnel
- Reducer with 3 screw holes
- Dimensions: Ø 150 mm, Ø 180 mm

Convection kit

Connecting rings (2 pieces) for mounting on the convection holes.

- Optional with: 500 - 1000, 600V, Corner Slim, Tunnel
- For more heating power
- Dimensions: Ø 125 mm

Easy air control

- At the front of the fire
- Both Instyle and Prostyle finishes

Door lock

- Stable and flexible door closure
- The cord ensures a good seal
- The door is adjustable and exchangeable
- Kit for self-closing door optional for Instyle 500-1000 series and Instyle Tunnel

A photograph of a misty forest. The trees are tall and thin, with green leaves. The ground is covered in green grass and small plants. The mist is thick, creating a soft, ethereal atmosphere. The lighting is soft and diffused, typical of a foggy day.

Central heating fires

Sustainable and
energy-conscious
wood burning

Green Design stands for sustainable, environmentally friendly and energy-conscious heating of fires and stoves connected to a central heating system.

Dik Geurts also supplies fires that you can connect to a central heating system, an environmentally friendly alternative way to heat your home. With these fires the hot flue gases are used to heat the water for your central heating system. Doing this means you get more efficiency from your fire or stove, resulting in a lower energy bill – and it's also sustainable.

- Environmentally friendly heating
- Durable/lower energy usage
- Suitable for any type of home
- Can be combined with solar panels and heat pumps
- Lower energy bill
- Maintenance friendly

More info

If you want to know more about Green Design or the operation of central heating fireplaces, go to www.drufire.com. There you can also download a special Green Design brochure.

INSERT-/BUILT-IN FIRES INSTYLE

Instyle Front

Instyle 1000
+ Classic Line frame 4S

Technical drawing showing front, top, and side views of the Instyle 1000 fireplace. Dimensions include: front width 1000, top width 845, opening width 550, opening height 159, depth 400, top panel width 860, top panel height 637, bottom panel width 1060, bottom panel height 437, and side height 580.

P. 53

Instyle Front

Instyle 600V Next
+ Classic Line frame 4S

Technical drawing showing front, top, and side views of the Instyle 600V Next fireplace. Dimensions include: front width 580, top width 344, opening width 150, opening height 174, depth 410, top panel width 440, top panel height 547, bottom panel width 640, bottom panel height 337, and side height 495.

P. 57

Instyle Front

Instyle 700V Next
+ Classic Line frame 4S

Technical drawing showing front, top, and side views of the Instyle 700V Next fireplace. Dimensions include: front width 680, top width 545, opening width 360, opening height 209, depth 450, top panel width 540, top panel height 667, bottom panel width 740, bottom panel height 457, and side height 615.

P. 57

Instyle Front

Instyle 800V Next
+ Classic Line frame 4S

Technical drawing showing front, top, and side views of the Instyle 800V Next fireplace. Dimensions include: front width 780, top width 645, opening width 400, opening height 209, depth 450, top panel width 640, top panel height 647, bottom panel width 840, bottom panel height 437, and side height 595.

P. 57

INSERT-/BUILT-IN FIRES PROSTYLE

Prostyle Front

Prostyle Tunnel 700
+ Slim Line frame

Technical drawing showing front, top, and side views of the Prostyle Tunnel 700 fireplace. Dimensions include: front width 700, top width 460, opening width 180, opening height 277, depth 554, top panel width 650, top panel height 617, bottom panel width 720, bottom panel height 547, and side height 600.

P. 47

Prostyle Front

Prostyle 500
+ Modern Line frame

Technical drawing showing front, top, and side views of the Prostyle 500 fireplace. Dimensions include: front width 520, top width 340, opening width 150, opening height 144, depth 344, top panel width 470, top panel height 537, bottom panel width 580, bottom panel height 427, and side height 480.

P. 54

Prostyle Front

Prostyle 550
+ Modern Line frame

Technical drawing showing front, top, and side views of the Prostyle 550 fireplace. Dimensions include: front width 527, top width 340, opening width 150, opening height 144, depth 344, top panel width 477, top panel height 507, bottom panel width 587, bottom panel height 617, and side height 560.

P. 54

Prostyle Front

Prostyle 600
+ Modern Line frame

Technical drawing showing front, top, and side views of the Prostyle 600 fireplace. Dimensions include: front width 600, top width 400, opening width 150, opening height 144, depth 354, top panel width 550, top panel height 427, bottom panel width 660, bottom panel height 537, and side height 480.

P. 54

Prostyle Front

Prostyle 650
+ Modern Line frame

Technical drawing showing front, top, and side views of the Prostyle 650 fireplace. Dimensions include: front width 650, top width 477, opening width 150, opening height 144, depth 374, top panel width 600, top panel height 442, bottom panel width 710, bottom panel height 552, and side height 495.

P. 54

Prostyle Front

Prostyle 700
+ Modern Line frame

Technical drawing showing front, top, and side views of the Prostyle 700 fireplace. Dimensions include: front width 700, top width 545, opening width 180, opening height 159, depth 384, top panel width 650, top panel height 547, bottom panel width 760, bottom panel height 547, and side height 600.

P. 54

Prostyle Front

Prostyle 800
+ Modern Line frame

Technical drawing showing front, top, and side views of the Prostyle 800 fireplace. Dimensions include: front width 800, top width 645, opening width 180, opening height 159, depth 394, top panel width 750, top panel height 527, bottom panel width 860, bottom panel height 637, and side height 580.

P. 54

Prostyle Front

Prostyle 1000
+ Modern Line frame

Technical drawing showing front, top, and side views of the Prostyle 1000 fireplace. Dimensions include: front width 1000, top width 845, opening width 550, opening height 159, depth 374, top panel width 950, top panel height 527, bottom panel width 1060, bottom panel height 637, and side height 580.

P. 54

INSERT-/BUILT-IN FIRES CONNECTION OPTIONS

Instyle / Prostyle

Conische ring

Technical drawing showing two conical rings. Dimensions include: diameters of 155 and 182, and inner diameters of 147 and 174 with a thickness of 55.

P. 58

Connection piece

Technical drawing showing two connection pieces. Dimensions include: diameters of 150 and 180, and a height of 44.

P. 58

Linerkit Pro

Technical drawing showing two Linerkit Pro connection options. Dimensions include: diameters of 140, 150, 190, and 180, and heights of 52 and 106.

P. 58

External air kit

Technical drawing showing an external air kit. Dimensions include: diameters of 102 and 80, and heights of 25 and 53.

P. 58

Convection kit

Technical drawing showing a convection kit. Dimensions include: diameters of 124 and 150, and a height of 50.

P. 58
